

FREEFLY SYSTEMS, INC. COMPANY OVERVIEW

Woodinville, WA—December 02, 2017—Freefly builds robots that create smiles. Our team consists of industry leading specialists all focused on one task – inventing solutions to allow unrestricted camera movement.

Freefly initially developed the CineStar line of multi-rotor camera platforms, which allowed smooth, stable and dynamic low-altitude aerials. After years of research and development in camera stability, Freefly Systems created the MōVI stabilized camera gimbal. Our goal with the MōVI is to empower a new era of stabilized cinematography on a variety of platforms, from handheld to helicopter, and everything in between.

We are passionate about our products and are driven by innovation, as we design and develop cinema products that we use on our own film productions. We have a hard working but laid back style and are located in Woodinville, WA.
